**FLOOR LEVELING – WITH THE PCI PERIPLAN FAMILY**

**“Floor leveling  
can be so easy.”**

Tim Necker, master tiler and winner of the first PCI Alpine Cup

## EVERYTHING OK WITH PROFESSIONAL FLOOR LEVELING

The PCI Periplan family of flowable leveling compounds has a joint strategy:

They are very low-stress products, have very good flow properties even with low layer thicknesses and are very easy to level. Nevertheless, each of the five members of the family has its own specific applications.

Thanks to the variety of variants available, we can offer the best solution for any application – whether you want to repair irregular surfaces, prepare for laying a floor covering or level an old floor.

On all substrates and under all coverings, these products have the following features:

- Highly flowable, saving time and energy in application
- Fast-setting, can be covered soon after laying – for fast construction progress
- Smooth surface with few pores – can be covered directly

The PCI Periplan family makes professional floor leveling work as easy and convenient as possible.

In line with the motto: **“Easy does it”**.

**PCI PERIPLAN  
THE CLASSIC**

**PCI PERIPLAN FEIN  
THE ELEGANT ONE**

**PCI PERIPLAN MULTI  
THE ALL-ROUNDER**

**PCI PERIPLAN EXTRA  
THE SPECIALIST**

**PCI PERIPLAN FLOW  
THE EXTRAORDINARY ONE**

Easy working: stir – pour – let it flow!

Using a pin or skid leveler, the leveling compounds in the PCI Periplan family can be distributed conveniently from a standing position.

The fiber-reinforced leveling compounds in the PCI Periplan family are the ideal choice for floor leveling over underfloor heating systems.

All the leveling compounds in the PCI Periplan family can also be applied using a pump.

## PCI PERIPLAN THE CLASSIC

You can always rely on PCI Periplan for repairing or leveling concrete floors, cement and calcium sulfate screeds, and non-heated mastic asphalt screeds. It can be applied in layers of up to 30 mm and covered with tiles or natural stone after about 3 hours.

### Product benefits

- Self-leveling – little effort required for application
- Can be applied to many different substrates with variable layer thicknesses
- Suitable for use under all coverings

## PCI PERIPLAN EXTRA THE SPECIALIST

Fiber-reinforced PCI Periplan Extra really comes into its own for floor leveling on wooden substrates and the bedding of underfloor heating systems. This is a genuine renovation specialist for layer thicknesses up to 60 mm.

### Product benefits

- Highly fiber-reinforced and self-leveling
- For leveling critical substrates
- Suitable for use under all coverings

## PCI PERIPLAN FEIN THE ELEGANT ONE

For fast, elegant floor leveling with very thin layers, there is no alternative to PCI Periplan Fein. This leveling compound has very good self-leveling properties and can be tapered to thicknesses as low as 0.5 mm.

### Product benefits

- Very good self-leveling properties
- Can be tapered to thicknesses as low as 0.5 mm
- Suitable for use under all coverings

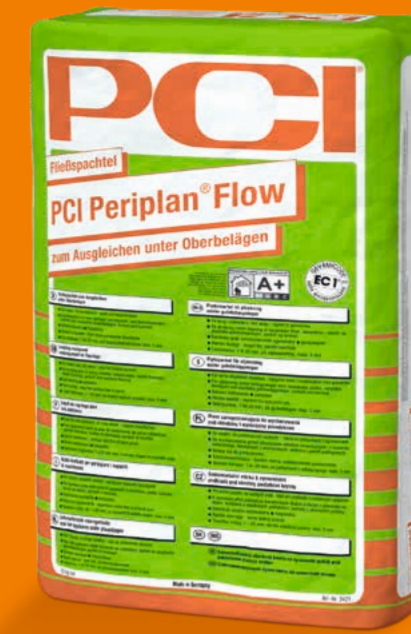

## PCI PERIPLAN MULTI THE ALL-ROUNDER

As the name suggests, PCI Periplan Multi is a real all-rounder. It can be used for floor leveling indoors, also directly as a floor covering, and outdoors under coverings with a layer thickness of up to 40 mm.

### Product benefits

- Fiber-reinforced, self-leveling
- For use indoors, also as a floor surface, and outdoors under coverings
- For use in residential, commercial and industrial buildings

## PCI PERIPLAN FLOW THE EXTRAORDINARY ONE

The new leveling compound flows into any corner and features an extremely smooth, polished surface. Suitable for all floor coverings.

PCI Periplan Flow just flows and flows. The new leveling compound is a real self-leveling champion. Thanks to its outstanding flow properties, this leveling compound can reach any corner "under its own steam" without additional reworking, but with a long processing time. The results speak for themselves: a mirror-like surface with few pores – without using a spiked roller and without subsequent sanding. After only about two hours, the surface can already be walked on and tiled over.

In brief: professional floor leveling was never so convenient and relaxing at the same time as saving time and money.

### Outstanding product benefits

- Extremely good flow properties – without time-consuming reworking
- Very fast setting – can already be walked on and tiled over after only about two hours
- Self-de-aerating – no additional work needed

CSA technology (PCI patent pending) is based on calcium sulfoaluminate cement (CSA cement) and ensures fast setting and higher earlier strength, thus accelerating construction progress. Compared with conventional cements, CSA cement is produced at significantly lower furnace temperatures, reducing energy consumption and carbon dioxide emissions.

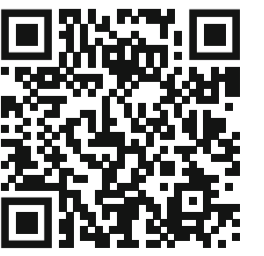

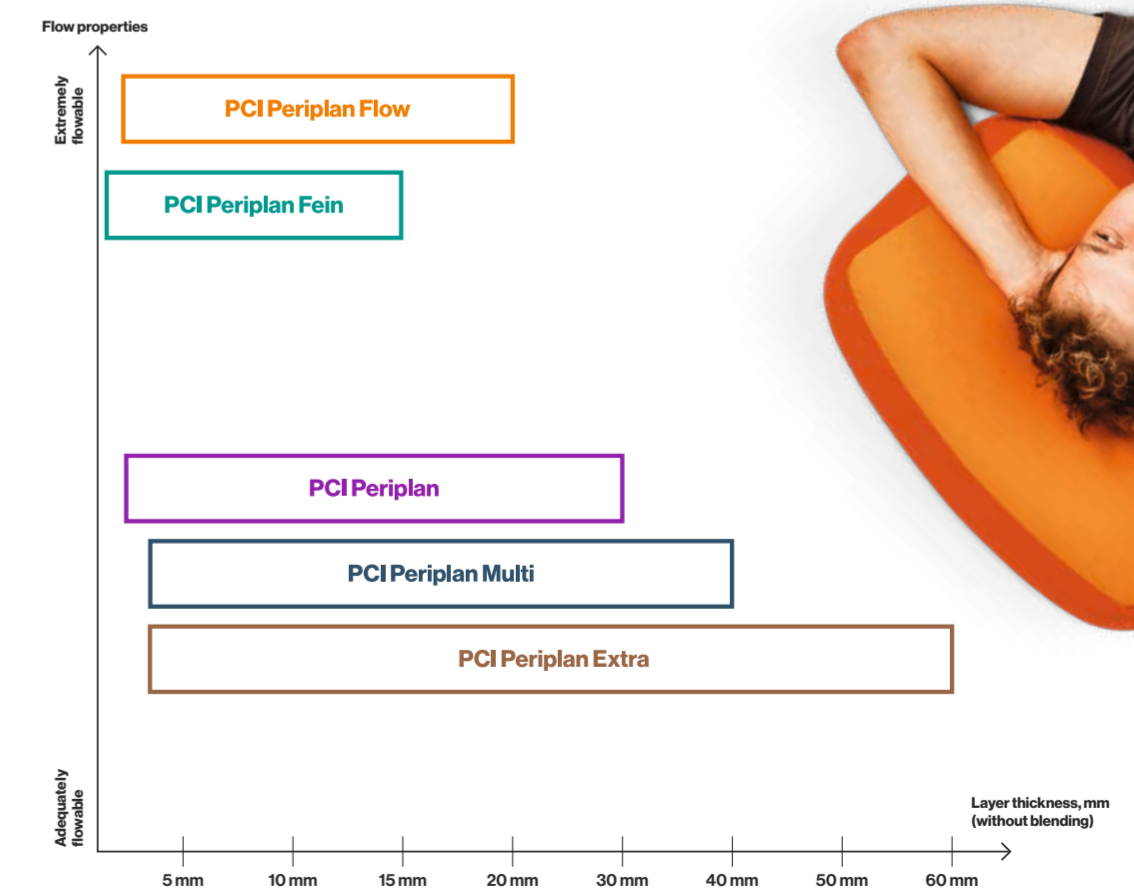

The result: an entirely new formulation based on sustainable raw materials with better product and processing properties than comparable leveling compounds.
