Für Bau-Profis

COMPLETELY WEIGHTLESS TILING

THE LIGHT ALLROUNDER
PCI NANOLIGHT

NEW!

With improved
processing
properties

The variable flexible adhesive is now even easier to process. Thanks to a new formulation and proven technology, the lightweight mortar is smoother and more efficient than ever before.

- Very smooth and effortless to apply – for convenient application
- Higher non-sag properties – no slipping and sagging of large format tiles on walls and floors
- Improved correction time up to approx. 15 minutes after laying the tiles

PCI NANOLIGHT

OUT OF THIS WORLD WITH LIGHT MORTAR TECHNOLOGY

Completely weightless tiling with the new PCI Nanolight. The light, multi-purpose flexible mortar brings weightlessness to the construction site. Thanks to an improved quality, the all-rounder is now even smoother, with better non-sag properties and can be processed with even longer correction times.

Even large-format, heavy tiles can be effortlessly fixed to the wall without slipping and corrected in a relaxed manner up to approx. 15 minutes after laying. PCI Nanolight is the multi-purpose star in the PCI universe. One for all substrates and all ceramic coverings.

The lightweight fillers make application easier and smoother than ever before.

Very relaxing and effort-saving tiling.

Easier tiling:

- Multi-purpose use: on all substrates, for all ceramic coverings, indoors and outdoors
- Consistency can be variably adjusted: as thin-bed mortar or flowable bed mortar and also for leveling
- For layer thicknesses from 1 to 10 mm
- Convenient application time of approx. 90 minutes, without initial hardening – can be walked on after approx. 8 hours
- Range improved by up to 45% compared with PCI tile adhesives without lightweight mortar technology
- Dust reduced, less dust during opening, pouring and stirring
- Lightweight – 15 kg bag with carry handle
- Very low emissions, GEV-EMICODE EC1 PLUS
